

**Pre-contractual disclosure for the financial products referred to in
Article 8 paragraphs 1, 2 and 2a of Regulation (EU) 2019/2088 and Article 6, first
paragraph, of Regulation (EU) 2020/852**

**Product name: BlackRock Sustainable Advantage US Equity Fund
Legal entity identifier: 549300U5207F8G705S53**

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Does this financial product have a sustainable investment objective?

What environmental and/or social characteristics are promoted by this financial product?

The Fund invests in Sustainable Investments. BlackRock defines Sustainable Investments as investments in issuers or securities that contribute to an environmental or social objective, do not significantly harm any of those objectives and where investee companies follow good governance practices. BlackRock refers to relevant sustainability frameworks to identify the alignment of the investment to environmental or social objectives.

Sustainable Investments should also meet the do no significant harm (DNSH) requirements, as defined by applicable law and regulation. BlackRock has developed a set of criteria to assess whether an issuer or investment does significant harm.

This Fund seeks to address key environmental and social issues that are deemed to be relevant to the issuers' businesses using ESG scores as a means of assessing issuers' exposure to and management of those risks and opportunities. The ESG scores recognise that certain environmental and social issues are more material based on the type of activity that the issuer is involved in by weighting the issues differently in the scoring methodology. The following environmental themes are captured in the environmental component of the ESG score: climate change, natural capital, pollution and waste and environmental opportunities. The following social themes are captured in the social component of the ESG score: human capital, product liability, stakeholder opposition and social opportunities. Corporate issuers that have better ESG scores are perceived to have more sustainable business practices.

Greenhouse gas emissions are categorised into three groups or 'scopes' by the most widely-used international accounting tool, the Greenhouse Gas (GHG) Protocol. Scope 1 covers direct emissions from owned or controlled sources. Scope 2 covers indirect emissions from the generation of purchased electricity, steam, heating and cooling consumed by the reporting issuer. Scope 3 includes all other indirect emissions that occur in an issuer's value chain. The Fund seeks to have a lower greenhouse gas emissions intensity of the portfolio relative to the Index, which is

the estimated greenhouse gas (Scope 1 and Scope 2) emissions per \$1 million of sales revenue across the Fund's holdings. For the avoidance of doubt, Scope 3 is not currently considered for this calculation.

This Fund applies the BlackRock EMEA Baseline Screens. This set of screens avoids exposures that have negative environmental outcomes by excluding direct investment in issuers that have material involvement in thermal coal and tar sands extraction, as well as thermal coal-based power generation. Negative social outcomes are also avoided by excluding direct investment in issuers involved in controversial weapons and nuclear weapons, and material involvement in production and distribution of civilian firearms and tobacco. This Fund also excludes issuers deemed to have failed to comply with the 10 UN Global Compact Principles, which cover human rights, labour standards, the environment, and anti-corruption.

The Fund does not use a reference benchmark for the purposes of attaining the ESG characteristics that it promotes, however, MSCI USA Index (the "Index") is used to compare certain ESG characteristics promoted by the Fund.

Sustainability Indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● ***What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?***

The sustainability Indicators used to measure the attainment of the environmental or social characteristics promoted by this Fund include:

1. The Fund's holdings in Sustainable Investments, as described above.
2. The Fund's ESG rating, which is the weighted average of ESG scores of the Fund's holdings, as described above.
3. The Fund's carbon emissions intensity, as described above.
4. The Fund's consideration of principal adverse impacts (PAIs) on sustainability factors, as described below.
5. The Fund's exclusion of holdings in issuers identified by the exclusion criteria set out in the BlackRock EMEA Baseline Screens, as described above.

● ***What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?***

This Fund invests at least 20% of its holdings in Sustainable Investments. All Sustainable Investments will be assessed by the Investment Manager to comply with BlackRock's DNSH standard outlined above.

BlackRock invests in Sustainable Investments which contribute to a range of environmental and / or social objectives which may include but are not limited to, alternative and renewable energy, energy efficiency, pollution prevention or mitigation, reuse and recycling, health, nutrition, sanitation and education and the UN Sustainable Development Goals ("Environmental and Social Objectives").

An investment will be assessed as contributing to an Environmental and/or Social Objective where:

- a) minimum proportion of the issuer's business activity contributes to an Environmental and/or Social Objective; or
- b) the issuer's business practices contribute to an Environmental and/or Social Objective.

● ***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

Sustainable Investments meet the DNSH requirements, as defined by applicable law and regulation. BlackRock has developed a set of criteria across all Sustainable Investments to assess

whether an issuer or investment does significant harm. Investments considered to be causing significant harm do not qualify as Sustainable Investments.

— *How have the indicators for adverse impacts on sustainability factors been taken into account?*

The indicators for adverse impacts on sustainability factors for each type of investment are assessed using BlackRock's Sustainable Investments proprietary methodology. BlackRock uses third-party data and/or fundamental analysis to identify investments which negatively impact sustainability factors and cause significant harm.

BlackRock makes use of internal analysis and third-party data sources to measure how issuers negatively impact sustainability factors and cause significant harm.

— *How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

Sustainable Investments are assessed to consider any detrimental impacts and ensure compliance with international standards of the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. Issuers deemed to have violated these conventions are not considered as Sustainable Investments.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse Impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Does this financial product consider principal adverse impacts on sustainability factors?

Yes

No

The Fund considers PAIs on sustainability factors through the application of the BlackRock EMEA Baseline Screens and its carbon reduction target.

The Fund takes into account the following PAIs:

- GHG emissions
- GHG intensity of investee companies.
- Exposure to companies active in the fossil fuel sector
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Exposure to controversial weapons (anti personnel mines, cluster munitions, chemical weapons and biological weapons)

In addition, this Fund takes into account the PAIs through BlackRock's DNSH standard for Sustainable Investments. This Fund will provide information on the PAIs in its annual report.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

The Fund seeks to gain at least 70% of its investment exposure to equity securities (e.g. shares) of companies domiciled in, listed in, or the main business of which is in, the United States of America.

The Fund uses quantitative (i.e. rule based) approach to stock selection. The models select stocks from a broad universe of equities (remaining after the application of ESG exclusionary screens and rank them broadly according to multiple characteristics, including company fundamentals, market sentiment,

macro-economic themes and ESG characteristics (each of which is described below). The Investment Manager assigns a weighting to each category within the models based on an assessment of the performance, volatility, correlation and turnover within each model.

Within the company fundamentals category, the Fund uses techniques to assess stock characteristics such as relative valuation, strength of earnings, quality of balance sheet and cashflow trends.

Within the market sentiment category, the Fund uses techniques to assess drivers such as the views of other market participants (for example, sell-side analysts, other investors and company management teams) as well as trends exhibited by related companies.

Within the macro-economic themes category, the Fund uses techniques to position the portfolio with respect to certain industries and styles (such as value, momentum and quality), which are best placed for prevailing macro conditions.

The ESG models used fall into various sub-categories, including risk mitigation (identifying companies with a high number of controversies, lawsuits, litigation, or concerns around the amount of tax they pay); human capital (identifying companies who attract a diverse employee base and have fair employment practices); environmental transition (measuring companies' greenhouse gas emissions, water intensity, and green innovation); and social impact (identifying companies who seek to address social issues and disease burden). ESG data is also incorporated across all the above quantitative models.

These quantitative models, combined with an automated portfolio construction tool which is proprietary to the Investment Manager, inform which stocks will comprise the Fund's portfolio, removing any that conflict with the BlackRock EMEA Baseline Screens outlined below and replacing them with stocks from within the same universe with a similar expected return. The Investment Manager reviews the positions generated by the portfolio construction tool before they are traded to compare against the categories (as described above) inputted to the model and to consider the impact of any subsequent public information in relation to the positions such as merger and acquisition announcements, significant litigation or changes in senior management personnel.

The portfolio construction tool is also subject to investment constraints which optimise the portfolio so that:

(a) the weighted average ESG rating of the Fund is higher than the ESG rating of the Index after eliminating at least 20% of the least well-rated securities from the Index; and

(b) the portfolio has a 30-50% lower carbon emissions intensity score overall, relative to the Index.

These ESG ratings and carbon intensity scores are as defined by MSCI. The Investment Manager will create a portfolio that generally seeks to deliver a superior ESG outcome versus the Index. More than 90% of the issuers of securities (excluding any money market funds) the Fund invests in are ESG rated or have been analysed for ESG purposes.

- ***What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?***

The binding elements of the investment strategy are as follows:

1. Maintain that the Fund holds at least 20% in Sustainable Investments.
2. Maintain that the weighted average ESG rating of the Fund will be higher than the Index after eliminating at least 20% of the least well-rated securities from the Index.
3. Maintain the Fund's carbon emissions intensity as 30-50% lower than that of the Fund's Index.
4. Apply the BlackRock EMEA Baseline Screens.
5. Ensure that more than 90% of the issuers of securities in which the Fund invests (excluding money market funds) shall be ESG rated or have been analysed for ESG purposes.

- ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

Whilst the Fund applies exclusionary screens to avoid investment in the activities listed above, there is no commitment to reduce the scope of investments by a minimum rate.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

● **What is the policy to assess good governance practices of the investee companies?**

BlackRock assesses good governance practices of the investee companies by combining proprietary insights and shareholder engagement by the Investment Manager, with data from external ESG research providers. BlackRock uses data from external ESG research providers to initially identify issuers which may not have satisfactory governance practices in relation to key performance indicators (KPIs) related to sound management structure, employee relations, remuneration of staff and tax compliance.

Where issuers are identified as potentially having issues with regards to good governance, the issuers are reviewed to ensure that, where the Investment Manager agrees with this external assessment, the Investment Manager is satisfied that the issuer has either taken remediation actions or will take remedial actions within a reasonable time frame based on the Investment Manager's direct engagement with the issuer. The Investment Manager may also decide to reduce exposure to such issuers.

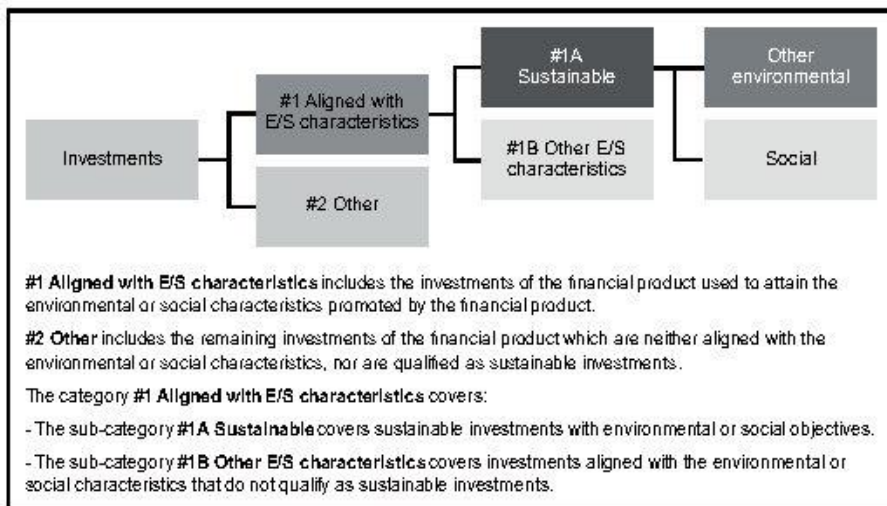

What is the asset allocation planned for this financial product?

A minimum of 70% of the Fund's total assets will be invested in investments that are aligned with the environmental and/or social characteristics described above (#1 Aligned with E/S characteristics). Of these investments, a minimum of 20% of the Fund's total assets will be invested in Sustainable Investments (#1A Sustainable), and the remainder will be invested in investments aligned with other environmental and/or social characteristics described above (#1B Other E/S characteristics). The Fund may invest up to 30% of its total assets in other investments (#2 Other investments).

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies

● **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

The Fund may use derivatives for investment purposes and for the purposes of efficient portfolio management. For derivatives, any ESG rating or analyses referenced above will apply only to the underlying investment.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Fund does not currently commit to invest more than 0% of its assets in Sustainable Investments with an environmental objective aligned with the EU Taxonomy, however, these investments may form part of the portfolio.

The two graphs below show the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.*

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

● **What is the minimum share of investments in transitional and enabling activities?**

The Fund does not commit to making investments in transitional and enabling activities, however, these investments may form part of the portfolio.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

A minimum of 20% of the Fund's total assets will be invested in Sustainable Investments. As noted above, these Sustainable Investments will be a mix of Sustainable Investments with an environmental objective that is not aligned with the EU Taxonomy or a social objective or a combination of both, and the exact composition may fluctuate.

The Fund invests in Sustainable Investments that are not aligned with the EU Taxonomy for the following reasons: (i) it is part of the investment strategy of the Fund; (ii) data to determine EU Taxonomy-alignment may be unavailable; and / or (iii) underlying economic activities may not be eligible under the EU Taxonomy's available technical screening criteria or may not comply with all requirements set out in such technical screening criteria.

What is the minimum share of socially sustainable investments?

A minimum of 20% of the Fund's total assets will be invested in Sustainable Investments. As noted above, these Sustainable Investments will be a mix of Sustainable Investments with an environmental objective that is not aligned with the EU taxonomy or a social objective or a combination of both, and the exact composition may fluctuate.

The Fund invests in Sustainable Investments that are not aligned with the EU Taxonomy for the following reasons: (i) it is part of the investment strategy of the Fund; (ii) data to determine EU Taxonomy-alignment may be unavailable; and / or (iii) underlying economic activities may not be eligible under the EU Taxonomy's available technical screening criteria or may not comply with all requirements set out in such technical screening criteria.

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

Other holdings are limited to 30% and may include derivatives, cash and near cash instruments and shares or units of CIS and fixed income transferable securities (also known as debt securities) issued by governments and agencies worldwide.

These investments may be used for investment purposes in pursuit of the Fund's (non ESG) investment objective, for the purposes of liquidity management and/or hedging.

No other holdings are considered against minimum environmental or social safeguards.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

No.

Please note that the MSCI USA Index is used to compare certain ESG characteristics promoted by the Fund.

- ***How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?***

Not applicable.

- ***How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?***

Not applicable .

- ***How does the designated index differ from a relevant broad market index?***

Not applicable.

- ***Where can the methodology used for the calculation of the designated index be found?***

Not applicable.
